1. This application contains claims directed to the following patentably distinct species of the claimed invention:

- 1) Figures 1A-1B and 5
- 2) Figure 1C
- 3) Figure 2A
- 4) Figure 6.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, there is no generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the

case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

2. Further, if the applicant elects figure 1C, the following restriction requirement must also be met.

3. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 8-9, drawn to an amplifier array which has the special technical feature of a first of a plurality of amplifier paths including a signal processing module and a second of the plurality of amplifier paths not including a signal processing module, classified in class 358, subclass 349.
- II. Claims 1-3 and 11, drawn to an optical array with a plurality of paths arranged in cascade, having the special technical feature of an additional path between an bypass input port and a bypass output port, classified in class 398, subclass 82.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as it can be used in an add/drop multiplexer. Instant invention II as claimed would not be used as an add/drop multiplexer because the add and drop ports are connected together. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

4. It is regretted that the above restriction requirement was not made because of an oversight. If the applicant elects Species 2, he must also elect one of the groups from the restriction requirement, (for example, I elect species 2, and group II which includes claims 1-3 and 11).
